

TECH-02	ISOXpress UNO Installation	Rev.: A
Effective Date: 12/6/2008	Issued by: Tech Support	Page 1 of 3
Apprv. by: Jack Kanholm - 12/6/2008		

1. Installation files and folders

1.1 The package consists of the following files and folders:

- **ISOXpressUnolnst.exe** (software installer)
- **IsoXpressData.zip** (compressed data folder with database and documents files)
- **dotnetfx.exe** (MS Framework 2.0 installer - original Microsoft)
- **ISOXpress UNO Installation Instructions.pdf** (PDF installation instructions)

2. Data Folder Installation Instructions

- 2.1 The **IsoXpressData** folder is packed in a ZIP archive (Zip Folder). Before copying it to your computer extract all folders and files from the ZIP archive (right-click **IsoXpressData.zip** archive and select **Extract All...** from the context menu).
- 2.2 Copy the **IsoXpressData** folder to any location on your computer. To copy, right-click the folder, and select **Copy** from the context menu. Then go to the destination (new) location and **Paste** (press **Ctrl+V** keys) the folder in the new location (don't just drag the folder to the new location, because a moved folder will carry with it old permissions and other legacy settings).
- 2.3 The **IsoXpressData** folder contains the database, documents files, logs, and license for the ISOXpress application. Choose the location for this folder very carefully. It must be a place that you regularly back up ('My Documents, for example). If you loose this folder, you loose all your documents and all other ISOXpress records and data.

3. Software Installation Instructions

- 3.1 The **ISOXpress** application is installed directly your computer using the **ISOXpressUnolnst.exe** installer.
- 3.2 Your computer must be running Windows operating system (Windows 2000 SP4, Windows XP SP2, or Windows Vista) and have installed MS Framework 2.0 or higher.
- 3.3 If Framework is not installed on a computer, the ISOXpress installer will abort with a message that Framework 2.0 is missing. When this happens, cancel the installation, and use the supplied **dotnetfx.exe** installer to install the Framework ('dotnetfx.exe' is the original Microsoft distributable file for installing Framework 2.0). After the framework is installed, start the **ISOXpressUnolnst.exe** installer again.
- 3.4 To install the ISOXpress application follow these steps:
- Run the **ISOXpressUnolnst.exe** installer, When installing on Windows Vista, start the installer by right-clicking the 'ISOXpressUnolnst.exe' file and selecting 'Run as administrator'.
 - When you start the ISOXpress application for the first time, you will be prompted to identify the location of the **IsoXpressData** folder.
 - Log in to your first installation with
user name: **admin**
password: **pass**

- 3.5 ISOXpress installs 'For All Users' and must be installed from an administrator account. However, after installation and configuration, the application can run from a regular user account.

5. Backing up the database and document folder

- 5.1 To back up all your ISOXpress data, copy the whole **IsoXpressData** folder from the location where you installed it, and save it in another location (another computer, hard drive, burn a CD disk, etc.)
- 5.2 To restore backed up data, copy your backup **IsoXpressData** folder back to the old location.

6. Technical support

- 6.1 If you have any problems or questions during installation or later while using the ISOXpress application, please call 626 796 9000 or email to support@isoxp.com

Good luck with your ISO project!
